Open only for PJ/C2C hiring type and fully-remote

Objective:

Senior Fullstack Developer with experience in microservices architecture, agile methodologies, and relational/non-relational databases. Seeking to contribute to challenging projects by applying development best practices and collaborating with multidisciplinary teams.

Overview

Senior Fullstack Java Developer with 4+ years of experience in building robust and scalable systems. Specialized in microservices architecture, Spring Boot, and integration with relational (Oracle) and non-relational (MongoDB) databases. Experience in agile environments (Scrum/Kanban) with strong analytical and collaborative skills. Technical differentiators include AWS/Cloud and OpenShift expertise. Committed to code best practices, automated testing, and high-quality continuous delivery.

Skills:

1. Java:

- **Java 11, 17, 21**
- **SpringBoot Framework and SpringBoot Cloud**
- **Hibernate**
- **JPA**
- **Maven**

2. Python:

- **Fast API experience for Rest APIs building**
- **Microservices building**
- **Experience with Django to build CRMs and ERPs**
- **Experience with token Jwt to provide security for APIs using M2M communication approach for communication between multiple apis**

3. Go

- **REST APIs building with Fiber**
- **RabbitMq integration for scenarios where there're multiple integrations between microservices**

4. Data Engineering:

- **Python scripts for data pipelines for ETLs(Extract, Loading and transforming)**
- **Data lakes building**
- **Experience with OracleDB, MySql, Postgres, MongoDB and Redis**
- **Experience with Sql programming for triggers, functions, customized queries, indices creation**

5. Devops:

- **Docker**
- **Kubernetes**
- **Helm**
- **CI/CD pipelines building**
- **Terraform**

6. FrontEnd:

- **Javascript experience**
- **Typescript experience**
- **HTML5 usage**
- **Experience with Next Js, Angular and react Js**
- **Experience with GraphQL usage**

Professional Experience

AI Architect/ Solution Architect

Nov 2024 - Present

Lester Cerioli is Lead Artificial Intelligence Architect at Lucas Technology Service, where he designs and deploys scalable AI solutions across enterprise domains. In 2025, he led the development of a proprietary AI system using containerized Ollama Server architecture, integrating advanced LLMs like 7B, 3B, Allaliba, and GemnAI.

He specializes in cloud-native architecture, with hands-on experience in Microsoft Azure (Azure ML, AKS, Functions, DevOps) and AWS (SageMaker, Lambda, ECS/Fargate, CloudFormation). Lester has built hybrid cloud environments, leveraging Kafka, Redis, GraphQL, and IaC tools like Terraform, Prometheus, and Grafana.

Currently, he's focused on training Lucas AI for medical applications and developing intelligent features for a SaaS platform tailored to clinical workflows.

His work blends deep learning, cloud infrastructure, and ethical AI, driving innovation in healthcare diagnostics and decision-making.

Skills: Microsoft Azure Machine Learning · Python (Programming Language) · Technology Management · Amazon S3 · AWS Lambda

Senior Golang

Lucas Technology Service

June 2016/ Jan2025

I'm a Senior Golang Software Engineer and Senior Data Engineer at Lucas Technology Services, with a strong focus on building scalable, high-performance applications and implementing advanced data engineering solutions. My expertise spans software development, data processing, cloud computing, and infrastructure automation, ensuring seamless integration, efficiency, and reliability in business-critical systems.

What I Do:

Software Engineering & DevOps:

Architect & Develop: Design and implement scalable, high-performance backend solutions using Go. Develop robust APIs, microservices, and distributed systems.

Enhance Performance: Optimize applications for speed, reliability, and high availability. Identify and resolve system bottlenecks to improve efficiency.

Integrate & Automate: Develop CI/CD pipelines, automate deployments, and implement containerized applications using Kubernetes, Docker, and Terraform.

Cloud Solutions: Deploy and manage cloud infrastructure on AWS and Azure, utilizing cloud-native services for high efficiency and scalability.

Security & Observability: Implement best security practices, monitoring, and logging solutions with Grafana, Prometheus, and Elasticsearch.

Data Engineering & Analytics:

Big Data Processing: Experience with Apache Spark and Databricks for large-scale data processing and transformation.

Data Lake Implementation: Design and manage data lakes on Azure and AWS for efficient storage and retrieval of structured and unstructured data.

ETL & Data Pipelines: Develop end-to-end ETL processes, orchestrating data movement across systems using Apache Airflow, Kafka, and Glue.

Database Management: Configure and optimize PostgreSQL, MySQL, SQL Server, and NoSQL databases (MongoDB, Redis) for efficient data storage and retrieval.

Data Sharing & Governance: Implement data-sharing strategies, ensuring secure and compliant access to critical business data.

Fullstack Java Developer

Lucas Technology Service | Jan 2010 – Dec 2024

Developed and maintained backend Java applications following Clean Code and SOLID principles.

Worked on microservices projects with Oracle and MongoDB database integration.

Used Git for version control and team collaboration.

Participated in the full project lifecycle, from refinement to production deployment.

Implemented automated testing (JUnit, Mockito) and code reviews.

Worked in agile methodologies (Scrum/Kanban).

Developed RESTful APIs with Spring Boot.

Integrated with Angular frontend.

Optimized SQL queries in Oracle databases.

Collaborated in cross-functional teams with a focus on continuous delivery.

Mid-Level Java Developer

Technical Skills

Backend: Java (Spring Boot, Microservices, JPA/Hibernate)

Frontend: Angular, HTML/CSS, JavaScript/TypeScript, React Js, Next Js

Databases: Oracle, MongoDB, SQL, Postgres

DevOps/Cloud: AWS (EC2, S3, Lambda), Docker, Kubernetes (differentiator)

Methodologies: Scrum, Kanban, CI/CD

Tools: Git, OpenShift (differentiator), Jira

Languages

English (C1)

Relevant Projects

Integrated Management System (IMS)

Backend in Java + Spring Boot, frontend in Angular.

Microservices architecture with Docker and AWS: [GitHub Link](#)

Oracle database for transactions and MongoDB for logs.

Payments API

Development of a RESTful API for transaction processing.

Integration with legacy systems and JWT authentication.

SKILLS

Go

Java

Spring Boot

Devops AWS
