 - ❑ **Availability:** Full-time (PJ/ C2C)
-

Professional Summary

Senior Golang Software Engineer with **10+ years of experience** designing, building, and operating **large-scale distributed systems** with a strong focus on **Kubernetes automation, cloud-native architectures, and system engineering**. Proven expertise in developing **high-performance Golang services, Kubernetes controllers/operators**, and **cluster lifecycle automation** across AWS, Azure, and GCP. Strong background in **DevOps, SRE, observability**, and **microservices troubleshooting** in production environments. Adept at collaborating across infrastructure, security, and product teams in Agile environments.

Core Technical Skills

Programming & Frameworks

- Golang (Advanced, Production-grade systems)
- REST & gRPC APIs
- Go Concurrency (goroutines, channels, worker pools)
- Clean Architecture, DDD, SOLID principles
- ORMs & Tooling: GORM, sqlx, Cobra, Viper
- Fiber, Gorilla

Datanases:

- Advanced Sql programming(functions, queries, triggers, performance)

- No-Sql databases: Redis, MongoDB, DynamoDB
- Cache-As-side approach

Messaging:

- Rventsabbit Mq
- Apache Kafka
- Architecture Driven Events

Kubernetes & Cloud-Native

- Kubernetes (EKS, AKS, GKE)
- Custom Controllers & Operators
- CRDs & Kubernetes APIs
- Cluster lifecycle management (upgrades, patching, governance)
- Helm, Kustomize
- Admission Controllers

Cloud Platforms

- AWS (EKS, EC2, IAM, S3, RDS, VPC)
- Azure (AKS, Azure DevOps)
- GCP (GKE, Cloud IAM)
- Infrastructure as Code: Terraform, CloudFormation

DevOps & Containerization

- Docker & Container Patterns
- CI/CD (GitHub Actions, Azure DevOps, GitLab CI)
- GitOps (ArgoCD, Flux)
- Linux-based environments (Debian, Ubuntu, RHEL)

Networking & Observability

- Kubernetes Networking, Ingress Controllers (NGINX, ALB)
 - Service Meshes (Istio, Linkerd – working knowledge)
 - Load Balancing & Traffic Management
 - Observability: Prometheus, Grafana, Loki
 - SRE Practices: SLOs, SLIs, Incident Response, RCA
-

Professional Experience

Senior Golang & Kubernetes Engineer

Lucas Technology Service(New York)
2016 – 2025

- Designed and implemented **Kubernetes operators and controllers in Golang**, leveraging CRDs to automate cluster operations and application lifecycle management.
 - Built **robust Golang automation tools** for Kubernetes cluster provisioning, configuration, upgrades, and patching across multi-cloud environments.
 - Developed **high-performance APIs in Golang**, utilizing native concurrency for scalability and low-latency systems.
 - Owned **end-to-end Kubernetes cluster lifecycle management**, including governance, security hardening, and configuration standards.
 - Collaborated with **DevOps, Infrastructure, Security, and Product teams** to deliver resilient, scalable cloud-native platforms.
 - Troubleshoot complex production issues spanning **microservices, networking, storage, and container orchestration**.
 - Implemented **observability and SRE practices**, including Prometheus metrics, Grafana dashboards, alerting, and post-incident RCAs.
 - Actively participated in **Agile/Scrum ceremonies**, sprint planning, reviews, and continuous improvement initiatives.
-

Blockchain Architect (Golang, Cloud)

Lucas Technology Service(New York)
2016 March – 2025 June

- Migrated legacy monolith systems to **cloud-native microservices** using Golang and Kubernetes.
- Built internal platforms for **automation, CI/CD pipelines**, and infrastructure tooling.
- Designed APIs and background workers handling **high-throughput, mission-critical workloads**.
- Worked extensively in **Linux environments**, optimizing performance and reliability.
- Supported production systems with **on-call rotations**, incident handling, and performance tuning.
- Innovative Blockchain Architect with extensive experience in designing and implementing scalable, secure decentralized solutions. Passionate about Web3, DeFi, NFTs, and smart contract development, with a strong background in Ethereum, Solidity, Hyperledger, and distributed ledger technologies (DLT). Proven track record in building robust blockchain infrastructures, optimizing consensus mechanisms, and leading cross-functional teams in delivering cutting-edge decentralized applications (dApps).
-
- ☒ Core Expertise:

- ✓ Blockchain Architecture – Designing high-performance, fault-tolerant networks (public, private, hybrid).
 - ✓ Smart Contracts – Development & auditing (Solidity, Rust, Vyper) for DeFi, DAOs, and enterprise use cases.
 - ✓ Web3 & DeFi – Building protocols, tokenomics, and cross-chain interoperability solutions.
 - ✓ Security & Scalability – Implementing layer-2 solutions (ZK-Rollups, Optimism), sharding, and PoS/PoW mechanisms.
 - ✓ Enterprise DLT – Hyperledger Fabric, Corda, and bespoke consortium blockchains.
 - ✓ DevOps for Web3 – CI/CD pipelines, containerized nodes (Docker/Kubernetes), and node orchestration.
 -
 - ✎ Career Highlights:
-

Key Achievements

- Reduced Kubernetes operational overhead by **40%** through custom controllers and automation.
 - Improved system reliability by implementing **SLO-based monitoring and alerting**.
 - Successfully led **multi-cluster Kubernetes upgrades** with zero downtime.
 - Designed scalable Golang services processing **millions of requests per day**.
-

Education

Stanford University

Bachelor's Degree in Software Analysis & Development

Completed: 2011

Stanford University

BMA in Technology Businesses (Postgraduate)

Completed: 2014

Availability

- **Immediate availability**
- Open to **Long-Term Contract (C2C)**
- Fully **Remote – USA Time Zones**
